Company: EVRY USA Corporation
Location: 1425 Greenway Drive, Suite 490, Irving, TX 75038 & various unanticipated locations throughout the U. S.
Position Title: Team Lead

Job Description:

Interact with various association stakeholders to collect business requirements and hold discussions with the offshore team to gain a better understanding of the business implementation. Analyze the business requirements and prepare an approach for implementation of business software. Prepare functional specification documents for requirements provided. Plan/estimate the implementation activities to computer program the business software. Allocate the implementation activities to the team to program business software. Assure quality for the implementation activities delivered to the customer. Design and implement business workflows using Bizagi BPMN toolkit. Involved in deployment of code through CICD Pipelines. Write the interfaces using .Net technologies to enable communications between different applications. Develop WebAPI to interface with other internal and external systems. Write technical scripts for databases. Coordinate with the development team and end-user for any requirement queries. Interact with customers for new changes in the business requirement and re-plan the change activities. Verify the computer programs done by the offshore development team to ensure that the customer business specifications are met. Prepare documents to keep track of the progress of activities done by the offshore development team. Enhance the knowledge of the offshore development team by conducting training and knowledge sharing sessions. Assist in conducting an analysis of any gaps in current functionalities. Work on implementations of change requests and enhancements in coordination with relevant AgFirst personnel based on the workload and urgency of the requests. Investigate and oversee the repair of assigned production issues. Assist in the deployment of change requests and enhancements developed by the offshore team to the User Acceptance Testing (UAT) environment. Participate in process of deploying the change request completed and verified to production environment. Manage and monitor critical deployments and provide hands-on assistance in the event of any critical issues. Travel and work at client sites as assigned. Multiple positions available.
